MEMORANDUM FOR DISTRIBUTION

FROM:

James T. Campbell
JAMES T. CAMPBELL

ACTING DIRECTOR, OFFICE OF MANAGEMENT, BUDGET
AND EVALUATION/ACTING CHIEF FINANCIAL OFFICER

SUBJECT:

Call for FY 2005 Budget and Reporting Classification Codes

This memorandum represents the call for the FY 2005 Budget and Reporting Classification Codes (B&Rs). We are accelerating the schedule for putting next year's B&Rs in place in order to accommodate the October 1, 2004, deployment of the new Integrated Management Navigation System (I-MANAGE) Standard Accounting and Reporting System (STARS). The FY 2005 B&R structure must be available to complete STARS testing requirements beginning this spring and early summer. In order to meet the very compressed schedule for the STARS accounting system conversion, it is critical that your office submit the right B&Rs on time this year. Furthermore, the STARS deployment schedule cannot accommodate rework, so your support is necessary to ensure that we get it right the first time. There will be no opportunity for non-Congressionally mandated changes to the B&R structure after the STARS implementation team has built system tables and year-end conversion crosswalks in July of this year. The due date for completing your FY 2005 B&R structure is May 15, 2004.

Your attention to, as well as your cooperation in, the following initiatives to provide linkage between budget and performance and to streamline program direction B&Rs is appreciated.

Linking B&Rs to Annual Targets

STARS will support the Department's efforts to better integrate budgets, costs, and performance measurement information in accordance with the President's Management Agenda. To accomplish this objective, the Department must establish linkage between performance data and the Department's B&R structure. During the past year, the Department has taken the initial steps to establish this linkage. Specifically, the Office of Program Analysis and Evaluation/OMBE worked with program offices to link B&Rs to the program goals (GPRA units). This work will allow STARS to link costs to programs at the 5 - 8 year goal level. We would now like to initiate the next step toward achieving the end-state envisioned under the President's Management Agenda by linking budget, costs, and performance data at the annual target level.

STARS will be able to integrate budget, costs, and performance data when a single B&R code is linked to a single target or when many B&Rs are linked to a single target. It is important to note that STARS is not able to link one B&R to multiple targets. This does not mean that expenditures incurred in support of one target cannot benefit other goals and targets. Joule, the Department's performance measurement system, supports the recording of narrative results, which can be used to identify where many performance measures can benefit from a single outlay of funds.

The fielding of STARS this October provides Departmental managers with the "capability" to manage costs for annual targets tracked in the Joule system, as well as those additional targets selected by management. This system capability, however, can only be realized to the extent that managers provide the linkage of B&Rs to targets. The system is flexible enough to account for many thousands of targets. Completion of this task will allow the manager responsible for the target(s) to examine actual costs incurred at the target level on a monthly basis allowing the full realization of the STARS system potential for the benefit of the Department's management.

The Budget and Reporting Code (BARC) system has been modified to identify the Departmental General Goal and the Program Goal (for GPRA units) associated with each B&R. In addition, a new database field was added to enable program offices to identify a single annual target for each B&R. Where possible, it is requested that you populate this database field with the appropriate annual target title. If a B&R supports multiple targets, you are to enter "Multiple Targets" in this field. If a B&R is not linked to any target, you are to enter "No Target" in this field. Your cooperation in this effort to link B&Rs to targets will aid the Department in identifying follow-on steps required to achieve full integration of budgets, costs, and performance.

Streamlining Program Direction B&Rs

In an effort to significantly reduce the number of B&Rs as well as streamline and standardize operational practices, we strongly encourage you to eliminate object class and, where appropriate, location related data elements from program direction B&Rs. While the ultimate goal is to streamline the operational process, we realize that there are individual cases where it may be necessary to continue to maintain separate B&Rs for individual offices within an organization. For example, certain organizations will continue to find it necessary to maintain separate B&Rs in order to properly align, track, and monitor individual office funding levels for execution purposes. However, in the vast majority of cases by undertaking this streamlining effort and eliminating the hundreds of program direction B&Rs that currently reside in the system, program offices will be making a significant contribution to the successful transition and operation of STARS.

Ultimately, streamlining of B&Rs will not adversely affect the budget execution of program direction funds since obligations and costs will be continued to be identified at the object class detail and location in STARS. Attached is an example of a current

program direction B&R structure (Attachment 1) and a proposed streamlined program direction B&R structure (Attachment 2) for one office. Please contact your ME-30 budget analyst to work through any issues you may have and close with them on program direction B&Rs before your final submission to ensure that it comports with your budget formulation structure. ME-10 will work with your offices over the next several months to assist you in this streamlining effort.

A new Master file to be used for FY 2005 changes has been added to BARC. **Be sure to enter FY 2005 B&R changes into the FY 2005 BARC database.** Changes that are applicable to both FY 2004 and FY 2005 must be entered using the FY 2004 database, which has been modified to accept changes to both databases simultaneously.

The BARC system can be accessed by pointing your Web Browser to the following:

<https://cr-gtn-nt-apps1.cr.doe.gov/barc/logon.asp>

If you have any questions concerning this matter or need refresher training in BARC, please call Donald Martus at 301-903-5270. If you have any questions related to linking performance targets to B&R codes, please call Sal Golub from ME-20 on 202-586-4043.
